

## Extragalactic Astrophysics / PHYS-GA 2051 / Fall 2018 / Syllabus

This course teaches the astrophysics of galaxies and quasars at the graduate level.

You can find the course notes at the course web site. Please read the introduction posted on the web site.

A useful textbook is *Extragalactic Astronomy and Cosmology*, by Peter Schneider. A good fraction of my notes are drawn from that book.

Class meets Monday and Wednesday at 11:00am in Room 902 of 726 Broadway.

The classes will proceed as follows on the next page (subject to revision!).

Homework will be based on exercises in the notes. The answers to the exercises in the notes are not complete! Actually not complete at all. You will help complete them (with proper attribution to you of course). Each week you are to pick one of the questions in the notes we covered and submit an answer in the form of a LaTeX file or Python notebook, emailed to me.

<i>Sep. 5</i>	Inventory	
<i>Sep. 10</i>	Light	
<i>Sep. 12</i>	Telescopes & Atmosphere	
<i>Sep. 17</i>	Detectors, Images, Spectra	<b>Exercise #1 due</b>
<i>Sep. 19</i>	Distance Ladder	<i>MRB travel, may reschedule</i>
<i>Sep. 24</i>	Cosmology	<b>Exercise #2 due</b>
<i>Sep. 26</i>	Structure Formation	
<i>Oct. 1</i>	Galaxies	<b>Exercise #3 due</b>
<i>Oct. 3</i>	Galaxies	
<i>Oct. 9</i>	Interstellar medium	<b>Exercise #4 due; Legislative Day</b>
<i>Oct. 10</i>	Star clusters	<i>MRB travel, may reschedule</i>
<i>Oct. 15</i>	Stellar evolution	<b>Exercise #5 due</b>
<i>Oct. 17</i>	Stellar populations	
<i>Oct. 22</i>	Stellar dynamics	<b>Exercise #6 due</b>
<i>Oct. 24</i>	Stellar dynamics	
<i>Oct. 29</i>	Galaxy dynamics	<b>Exercise #7 due</b>
<i>Oct. 31</i>	Emission line spectra	
<i>Nov. 5</i>	<i>No class</i>	<i>MRB travel</i>
<i>Nov. 7</i>	Star formation	<b>Exercise #8 due</b>
<i>Nov. 12</i>	Nucleosynthesis	<b>Exercise #9 due</b>
<i>Nov. 14</i>	Chemical evolution	
<i>Nov. 19</i>	Black holes in galaxies	<b>Exercise #10 due</b>
<i>Nov. 21</i>	<b>Thanksgiving Recess: no class</b>	
<i>Nov. 26</i>	Active galactic nuclei	<b>Exercise #11 due</b>
<i>Nov. 28</i>	Gravitational lensing & clusters	
<i>Dec. 3</i>	Groups	<b>Exercise #12 due</b>
<i>Dec. 5</i>	High redshift galaxies	
<i>Dec. 10</i>	Ly- $\alpha$ forest	<b>Exercise #13 due</b>
<i>Dec. 12</i>
